UNIVERSITY OF RAJASTHAN  
JAIPUR

SYLLABUS

M.Phil. in Mathematics

Semester Scheme

Examination 2017-2018
Scheme of Examination: One Semester
(July to October teaching and examination in November)

There shall be four papers in all. Two papers are compulsory and two papers are elective.

3 hrs. duration Each Theory paper and dissertation Max. Marks – 80
       Internal assessment Max. Marks – 20
Total Marks – 100
(for each four papers)

(Internal Assessment will be done by Teacher concerned on the basis of test papers,
regularity in the class and performance of the Candidate).

Semester – I is common for both Ph.D. and M.Phil. students.

Teaching Pattern:
Self study with guidance from a Faculty Member, who will act as Supervisor. To start
with, each Supervisor will give one seminar lecture to all the students offering the paper
so as to provide a model to the students.

For Semester – I, the papers are as follows:

Paper – I: Research Methodology
Paper – II: Analysis of Published Research Paper
(A short dissertation is to be submitted by each student under the supervision of a faculty member)

Each student has to opt two papers out of the following
Papers III to IX:

Paper – III: Advanced Numerical Analysis
Paper – IV: Generalized Hypergeometric Functions and Fractional Calculus
Paper – V: Operations Research-I
Paper – VI: Mathematical Modelling and Perturbation Methods
Paper – VII: Integral Transforms and Advanced Tensor Analysis
Paper – VIII: Advanced Graph Theory-I
Paper – IX: Relativistic Cosmology and Differential Forms

Note:
1. There will be four hour teaching in a week per paper including dissertation.
2. For a pass in course work for Ph.D. and M.Phil. course a candidate shall be
   required to obtain (a) at least 40% marks in each paper separately in internal
   assessment and external assessment and (b) a minimum of 50% marks in
   aggregate of all the papers prescribed for the examination (internal and external
   assessment taken together).
Paper – I: Research Methodology

3 hrs. Duration

<table>

<tbody>
<tr>
<td>Max. Marks: 80</td>
<td>Max. Marks: 20</td>
</tr>
</tbody>
</table>

(Internal Assessment will be done by Teacher concerned on the basis of test papers, regularity in the class and performance of the Candidate).

Note: This paper is divided into Four Units. Two questions will be set from each Unit. Candidates are required to attempt FOUR questions in all taking one question from each Unit. All questions carry equal marks.

Unit I: Concept of Research, Types and approaches, Ethics in Research, Types and Methods of Research, Report Writing, The First Draft, title page, table of contents, headings and sub-headings, footnotes, tables and figures, appendix, References etc

Unit II: Plagiarism checking, Editing, Post Writing Stage, Elements of Thesis, Title Page, Table of Contents, Proof Reading, Use of Computer in Research, Use of technology and other equipments in Research.

Unit III: Preparation of Power Point Presentation, Introduction to UGC INFONET, INFLIBNET and ERNET etc. Writing a Research Paper, Choosing a Topic.

Unit IV: Preparing a Working Bibliography, Use of available Computer Softwares and tools in Research

Paper – II: Analysis of Published Research Paper

(A short dissertation is to be submitted by each student under the supervision of a faculty member)

<table>

(Internal Assessment will be done by Teacher concerned on the basis of test papers regularity in the class and performance of the Candidate).

Note: This paper is divided into Two Units. Four questions will be set from each Unit. Candidates are required to attempt FOUR questions in all taking two questions from each Unit. All questions carry equal marks.

Paper – IV : Generalized Hypergeometric Functions and Fractional Calculus
3 hrs. Duration
Theory Paper
Max. Marks - 80
Internal Assessment
Max. Marks - 20

(Internal Assessment will be done by Teacher concerned on the basis of test papers, regularity in the class and performance of the Candidate).

Note: This paper is divided into Two Units. Four questions will be set from each Unit. Candidates are required to attempt FOUR questions in all taking two questions from each Unit. All questions carry equal marks.

Paper-V: Operations Research-I
3 hrs. Duration
Theory Paper
Max. Marks - 80
Internal Assessment
Max. Marks - 20

(Internal Assessment will be done by Teacher concerned on the basis of test papers, regularity in the class and performance of the Candidate).

Note: This paper is divided into Two Units. Four questions will be set from each Unit. Candidates are required to attempt FOUR questions in all taking two questions from each Unit. All questions carry equal marks.

Unit 1: Theory of Games – Basic definitions, Saddle point. Optimal strategies and the value of game. Fundamental theorem of game theory. 2x2 games without saddle point. Graphical method for 2xn and mx2 games. Inventory Models – Definition, elementary inventory models e.g. EOQ model without and with shortages and EOQ with constraints.

Unit 2: Replacement and Reliability Models – Replacement of items that deteriorate. Replacement of items that fail completely and other replacement problems. Queuing Theory – Definition, Queuing system. Arrival distribution theorem, Distribution of departures, Probabilistic queuing models – Models I to IX; Mixed queuing models – Model X; Deterministic queuing model – model XI.
Paper-VI: Mathematical Modelling and Perturbation Methods

3 hrs. Duration  Theory Paper  Max. Marks 80
Internal Assessment  Max. Marks 20

(Internal Assessment will be done by Teacher concerned on the basis of test papers, regularity in the class and performance of the Candidate).

Note: This paper is divided into Two Units. Four questions will be set from each Unit. Candidates are required to attempt FOUR questions in all taking two questions from each Unit. All questions carry equal marks.

Unit - I: Perturbation Methods

Unit - II: Mathematical Modelling

Paper-VII: Integral Transforms and Advanced Tensor Analysis

3 hrs. Duration  Theory Paper  Max. Marks 80
Internal Assessment  Max. Marks 20

(Internal Assessment will be done by Teacher concerned on the basis of test papers, regularity in the class and performance of the Candidate).

Note: This paper is divided into Two Units. Four questions will be set from each Unit. Candidates are required to attempt FOUR questions in all taking two questions from each Unit. All questions carry equal marks.

Unit - I: Integral Transforms

Unit - II: Advanced Tensor Analysis

Generalized Kronecker delta, Krutkov tensor, Ricci rotation coefficients and geometrical properties, Hypersurface, Gauss formulae, Curvature of a curve in a hypersurface, normal curvature of a hyper surface, Conformal invariance, classification of gravitational field,
Space-matter tensor, Conharmonic curvature tensor, Conharmonically flat space, Symmetry, Maximally symmetric space, spherical, plane and cylindrical symmetries.

**Paper-VIII: Advanced Graph Theory-I**

<table>

(Internal Assessment will be done by Teacher concerned on the basis of test papers, regularity in the class and performance of the Candidate).

**Note:** This paper is divided into Two Units. Four questions will be set from each Unit. Candidates are required to attempt FOUR questions in all taking two questions from each Unit. All questions carry equal marks.

**Unit-I:**
Graphic sequences, The Petersen graph, Cayley's formula, Matrix tree theorem, Matchings, Maximal and maximum matchings, Alternating and augmenting paths, Hall’s matching condition, Marriage theorem, Vertex and edge covers, Independent sets, Algorithm for computing maximum bipartite matching, Planar embeddings, Planar graphs, Dual graphs, Outerplanar graphs.

**Unit-II:**
Line Graphs - Some properties of line graphs, Characterization of line graphs, Special line graphs, Line graphs and traversability. The automorphism group of a graph, Operation on Permutation groups, The group of a composite graph, Graphs with a given group, Symmetric graphs.

**Paper- IX: Relativistic Cosmology and Differential Forms**

(Internal Assessment will be done by Teacher concerned on the basis of test papers, regularity in the class and performance of the Candidate).

**Note:** This paper is divided into Two Units. Four questions will be set from each Unit. Candidates are required to attempt FOUR questions in all taking two questions from each Unit. All questions carry equal marks.

**Unit 1:**
Lie derivative of a Tensor field, Scalar function, Contravariant and covariant vectors, Covariant tensor of rank two, Symmetry and killing equations, Integrability of killing equation, Geodesic deviation, Conformal curvature tensor, its properties, Algebraic classification of conformal curvature tensor.

**Unit 2:**
Basic equations of isotropic cosmology, singularity and Singularities in isotropic models, Red Shift in non-static form of de-Sitter universe, Einstein-space, Cosmological principles (perfect, ordinary and weak), Relativistic models not obeying cosmological principle, Godel universe and its properties.
M.Phil. Mathematics Examination 2017 and onwards

Scheme of Examination: Two Semesters
(July to October teaching and examination in November for Semester – I) and December to March teaching and examination in April for Semester – II)

For Semester – I teaching is common for both Ph.D. and M.Phil. students. (Papers, Syllabus and Scheme of Examination are also common)

For Semester – II

<table>
<thead>
<tr>
<th>3 hrs. Duration</th>
<th>Theory Paper</th>
<th>Max. Marks-80</th>
</tr>
</thead>
<tbody>
<tr>
<td>Internal Assessment</td>
<td>Max. Marks-20</td>
<td></td>
</tr>
</tbody>
</table>

(Internal Assessment will be done by Teacher concerned on the basis of test papers, regularity in the class and performance of the Candidate).

Dissertation Max. Marks-100

Teaching Pattern:
Self study with guidance from a Faculty Member, who will act as supervisor. To start with, each Supervisor will give one seminar lecture to all the students offering the paper so as to provide a model to the students.

For Semester – II, the papers are as follows:

Paper – I: Advanced Mathematical Analysis
Paper – II: Analysis of Published Research Paper
(A short dissertation is to be submitted by each student under the supervision of a faculty member)

Each student has to opt two papers out of the following Papers III to VIII:

Paper – III: Advanced Numerical Analysis
Paper – IV: Generalized Hypergeometric Functions and Fractional Calculus
Paper – V: Operations Research-II
Paper – VI: Non-Newtonian Fluid Dynamics
Paper – VII: Advanced Graph Theory-II
Paper – VIII: Relativistic Cosmology and Differential Forms

Note:
1. There will be four hour teaching in a week per paper including dissertation.
2. For a pass in course work for Ph.D. and M.Phil. course a candidate shall be required to obtain (a) at least 40% marks in each paper separately in internal assessment and external assessment and (b) a minimum of 50% marks in aggregate of all the papers prescribed for the examination (internal and external assessment taken together).
Note: Paper I and II are compulsory and two papers out of the papers III to VIII will remain the same which the candidate opted in Semester-I.

Paper – I : Advanced Mathematical Analysis (Compulsory for all candidates)

3 hrs. Duration

<table>
<thead>
<tr>
<th>Theory Paper</th>
<th>Max. Marks 80</th>
</tr>
</thead>
<tbody>
<tr>
<td>Internal Assessment</td>
<td>Max. Marks 20</td>
</tr>
</tbody>
</table>

(Internal Assessment will be done by Teacher concerned on the basis of test papers, regularity in the class and performance of the Candidate).

Note: This paper is divided into Four Units. Two questions will be set from each Unit. Candidates are required to attempt FOUR questions in all taking one question from each Unit. All questions carry equal marks.

Unit 1:
Real valued convex function on normed spaces, Bilinear forms, Lax Milligram Lemma, Differentiation and Integration in normed spaces, Gateaux derivative, Frechet derivative, Brouwer's and Schauder's fixed point theorems. Banach Fixed Point Theorem. Application of Banach Contraction Principle to matrix equation.

Unit 2:
Sylow's theorem, Semigroup, Semigroup of relations on a set of Congruences, Factor groupoids and homomorphisms, Homotopy Type, The Fundamental Group, Covering Spaces.

Paper – II : Dissertation :
Each candidate has to submit a dissertation, based upon the papers opted by the candidate in M.Sc./M.Phil. Course, equal to a paper carrying 100 marks

| External Evaluation | Max. Marks 100 |

Paper – III: Advanced Numerical Analysis

3 hrs. Duration

<table>
<thead>
<tr>
<th>Theory Paper</th>
<th>Max. Marks 80</th>
</tr>
</thead>
<tbody>
<tr>
<td>Internal Assessment</td>
<td>Max. Marks 20</td>
</tr>
</tbody>
</table>

(Internal Assessment will be done by Teacher concerned on the basis of test papers, regularity in the class and performance of the Candidate).

Note: This paper is divided into Two Units. Four questions will be set from each Unit. Candidates are required to attempt FOUR questions in all taking two questions from each Unit. All questions carry equal marks.

Unit 1:
Explicit three level difference scheme, Implicit scheme. First order hyperbolic equation: 
Lax – Wendroff formula.

Unit 2:

Paper – IV : Generalized Hypergeometric Functions and Fractional Calculus
3 hrs. Duration Theory Paper Max.Marks-80
Internal Assessment Max.Marks-20
(Internal Assessment will be done by Teacher concerned on the basis of test papers, regularity in the class and performance of the Candidate).

Note: This paper is divided into Two Units. Four questions will be set from each Unit. Candidates are required to attempt FOUR questions in all taking two questions from each Unit. All questions carry equal marks.

Unit 1:

Unit 2:
Paper-V: Operations Research-II
3 hrs. Duration	Theory Paper	Max.Marks-80
Internal Assessment	Max.Marks-20
(Internal Assessment will be done by Teacher concerned on the basis of test papers, regularity in the class and performance of the Candidate).
Note: This paper is divided into Two Units. Four questions will be set from each Unit. Candidates are required to attempt FOUR questions in all taking two questions from each Unit. All questions carry equal marks.

Unit 1:
Transportation Models – Mathematical formulation, Initial basic feasible solution, Optimality test, Transportation algorithm for minimization problem, Degeneracy in transportation problems, Unbalanced transportation problem.
Integer Linear Programming – Definition, Gomory’s cutting plane method, Branch and Bound method, Applications of Integer programming.

Unit 2:
Dynamic Programming models –Definition, Bellman’s principle of optimality, Minimum path problem, Single additive constraint- Multiplicatively and additively separable return, Single multiplicative constraint, Additively separable return, System involving more than one constraint. Applications in production, Inventory control, Linear programming and reliability. Decision Theory.

Paper VI: Non-Newtonian Fluid Dynamics
3 hrs. Duration	Theory Paper	Max.Marks-80
Internal Assessment	Max.Marks-20
(Internal Assessment will be done by Teacher concerned on the basis of test papers, regularity in the class and performance of the Candidate).
Note: This paper is divided into Two Units. Four questions will be set from each Unit. Candidates are required to attempt FOUR questions in all taking two questions from each Unit. All questions carry equal marks.

Unit 1:

Unit 2:
Unidirectional shear flows. Form of the stress tensor. Steady shear flow material functions. Unidirectional unsteady shear flow material functions. Measurement of viscosity and normal stress coefficients in (i) Cone and plate instrument and (ii) Parallel disk instrument.
Paper-VII: Advanced Graph Theory-II
3 hrs. Duration Theory Paper Max.Marks-80
Internal Assessment Max.Marks-20

(Internal Assessment will be done by Teacher concerned on the basis of test papers, regularity in the class and performance of the Candidate).

Note: This paper is divided into Two Units. Four questions will be set from each Unit. Candidates are required to attempt FOUR questions in all taking two questions from each Unit. All questions carry equal marks.

Unit-I:
Vertex cuts and edge cuts, connectivity and edge-connectivity, bonds, blocks, block-cutpoint graphs, 2-connected graphs, Menger's theorem. Total transformation graphs. Some properties of total transformation graphs.

Unit-II:

Paper-VIII: Relativistic Cosmology and Differential Forms
3 hrs. Duration Theory Paper Max.Marks-80
Internal Assessment Max.Marks-20

(Internal Assessment will be done by Teacher concerned on the basis of test papers, regularity in the class and performance of the Candidate).

Note: This paper is divided into Two Units. Four questions will be set from each Unit. Candidates are required to attempt FOUR questions in all taking two questions from each Unit. All questions carry equal marks.

Unit 1:
Non-static cosmological models, Robertson-Walker model and its derivation and Geometrical properties, Friedmann-Robertson-Walker model and its scale factor. Three different forms of scale factor, Doppler effect in Robertson-Walker model, Horizons (Event and Particle), Big Bang Theory, Steady state theory.

Unit 2:

Note: 1. There will be Four hour teaching in a week per paper including dissertation.
2. For a pass, in M.Phil. course, a candidate shall be required to obtain: (a) at least 40% marks in each paper separately in internal assessment and external assessment and (b) a minimum of 50% marks in aggregate of all the papers prescribed for the examination (internal and external assessment taken together).
