

UNIVERSITY OF RAJASTHAN JAIPUR

SYLLABUS

B.Sc. (HONS.) PART-III

Examination-2020

Raj / Jas

Dy. Registrar (Academic-I)
University of Rajasthan
Jaipur

Scheme of Examination
B.Sc(Honours) Part-III
(10+2+3 Pattern)

For a pass at each examination a candidate should be required to obtain a minimum of 36% marks in each subsidiary subjects and 40% marks in the Honours subjects, passing separately in the practicals, wherever prescribed, shall be necessary.

Successful candidates will be classified as under :

First Division 60%	of the aggregate marks prescribed both in Honours and subsidiary subject of Part I, II, & III Examination taken together.
Second Division 50%	

All the rest will be declared to have passed the examination if they obtain a minimum of 40% marks in the aggregate.

The number of papers and practicals, wherever prescribed the duration of examination, maximum marks and minimum pass marks shall be shown in the relevant syllabus.

A candidate shall be required to offer one Honours subjects and one subsidiary subject out of the following subjects to the condition that the same were offered by him as optional subjects at the First Year T.D.C. Examinations of the University or an examination recognized by the Universities equivalent thereto :

Honours Subjects :

1. Physics
2. Chemistry
3. Zoology
4. Botany
5. Mathematics
6. Psychology
7. Geography

N.B. Candidates shall be required to offer Four papers and practicals (wherever prescribed) of the Honours subject offered by him.

CONTENTS

Syllabus (Subsidiary Subjects) (Same Courses of Study as prescribed for Part-II T.D.C. Pass Course)

Subjects (Honours Subjects) :-

1.	Physics	4-12
2.	Chemistry	13-21
3.	Zoology	22-31
4.	Botany	32-41
5.	Mathematics	42-49
6.	Psychology	50-54
7.	Geography	55-60

 University of Rajasthan
 Jaipur

1. PHYSICS

B. Sc Honors PART III

Paper IX: Basic Computer Physics and Applications

Unit- I

Algorithm development: Problem analysis, flow chart, decision tables; Examples of simple algorithms; Programme Design: Debugging syntax error, run-time error, logical error, programme verification and testing.

Data Representation: Representation of positive and negative numbers, fixed point representation, floating point representation. Arithmetic operations with normalized floating point numbers and its consequences, character representation, rounding off of numbers, absolute and relative errors, error detection and error correcting codes.

Unit- II

Programming Language C:

Numeric constants, declaring variable names, character data type; Arithmetic operators, hierarchy of operations, assignment statements, Input/output statements; Library functions, Elementary Programmes in C for numeric and string processing.

Conditional statements: relational operators; Arithmetic IF and Logical IF statements; Unconditional transfer: GO TO statement; Looping: DO loops, nested loops; Functions and subroutines; Subscripted variables: vectors and arrays; Writing and executing C programmes. Programmes in C to (i) compute magnetic field due to a current carrying coil (ii) compute electric field due to a system of point charges (iii) study frequency response of an LCR circuit (iv); Evaluate Bessel's function, Legendre function, Hermite Polynomial, Langerre's Polynomial by series expansion. Evaluation of simple functions by Taylor Series Expansion.

Unit- III

Iterative Methods: Solution of algebraic and transcendental equations using bisection method, method of false position, Newton-Raphson method; Complex zeros, zeros of polynomials; Simple applications related to Physics like programmes in C to evaluate zeros of simple functions.

Interpolation: Lagrange interpolation, Difference tables, truncation error in interpolation, Spline interpolation.

Unit- IV

Least Square Approximation: Linear regression, Polynomial regression, fitting exponential and trigonometric functions, approximation of functions by Taylor' series and Chebyshev polynomials, curve fitting and polynomial fitting; Programmes in C related to physics on above topics.

Numerical Integration: Trapezoidal rule, Simpson's rule, errors in integration formulae, Gaussian quadrature formulae. Programmes in C related to physics on above topics.

Unit- V

Numerical Solution of Ordinary differential equations: Taylor's method, Euler's method and Runge-Kutta methods; Programmes in C related to physics on above topics.

Numerical Solution of Partial Differential Equations

Finite Difference methods for solution of (i) The diffusion equation (ii) the wave equation and (iii) the Laplace equation; Programmes in C related to physics on above topics.

Reference Books:

1. Computer Science, R. Dheen Dayal (Tata Mc Graw Hill)
2. Computer System Architecture, Morris-Mano (Prentice Hall of India)
3. Computer Oriented Numerical Methods, V. Rajaraman (Prentice Hall of India)
4. Mathematical Methods, Potter and Goldberg (Prentice Hall of India)
5. Computational Methods for Partial Differential Equations, M. K. Jain, S. R. K. Iyenger, R. K. Jain, (New Age International)

Rej. Iyer

(Academic)
University of Rajasthan
JAIPUR

Syllabus : B.Sc. (Hons.) Part-III

Paper-X : Introductory Nuclear and Particle Physics

Note : Five questions are to be set taking one from each unit (each question will have an internal choice). Student will attempt all the five questions. 40% weightage will be given to problems and numericals.

Unit I : Basic Nuclear Characteristics

- (i) Nuclear mass, nuclear size and nuclear matter—The mass table, binding energy of nucleons, nuclear size, semiempirical mass formula, Nuclear matter characteristics, theory of binding energy and the pairing energy, Nuclear stability and abundance of nuclides. Spin and parity of nuclear states, magnetic dipole and electric quadrupole moments of nucleus (Qualitative discussion only).
- (ii) General nature of force between nucleons, scattering of neutrons by protons at low energy, two nucleon system—the deuteron magnetic dipole and electric quadrupole moments, non-central forces, p-p and n-n scattering at low energy, charge independence of nuclear forces and concept of iso-spin invariance.

Unit II : Nuclear Models and Fission

- (i) Empirical evidence for the regularity of nuclear properties—nuclear mass and binding energy, magic numbers. The single particle shell model—the average shell model potential. Multipole fields, the electromagnetic matrix elements, life time-energy relations, the Weisskopf formula of transition rate, nuclear isomerism, internal conversion. Zero-zero transitions.
- (ii) Fission—Discovery of fission, Theory of fission, Energy release, criticality of a Reactor and four factor formula, types of fuels and types of reactors, Breeder Reactor, Neutron cycle in a thermal Nuclear Reactor.

Unit III : Nuclear Interaction

- (i) Weak interactions : nuclear beta decay, the neutrino, electron capture experimental information, Fermi and Gamow Teller transitions, Fermi Theory, selection rules (non-relativistic case only). Mass of neutrino, parity violation.

University of Rajasthan

- (ii) The strong interaction: strength of strong interaction, nuclear and particle resonances i.e. introduction of resonance states in high energy particle interactions. Alpha decay and barrier penetration and related experimental information. Selection rules of strong interaction. Introduction of SU (3) symmetry.

Unit IV : Introduction of Particles and Conservation Laws

Introduction of Electron, alpha particles, photon, positron, neutron neutrino and the muons. Baryons and leptons.

Discovery of pion and its characteristics, deltas, Stangeness and kaons etc, lambda and other hyperons. Introduction of charge conjugation, space parity and Gellman Nishijima Scheme. Pa tron, quark model-quark and gluons, quark composition of baryons and mesons J/Ψ particle, W and Z particles and Higgs. Emphasis should be given on experimental discoveries and conservation laws while introducing the particles and resonances.

Unit V : Passage of radiation in matter

- (i) The interaction of neutron and gamma-radiation with matter : related effects and Laws, passage of charged particles through matter, energy loss by collision, energy loss by radiative processes, absorption of electromagnetic radiation. Experimental Studies-Multipole coulomb scattering, range-energy curve straggling, capture and loss, stopping power for heavy ions, concept of radiation safety.
- (ii) Nuclear techniques-Tandem, electrostatic generator Linear accelerators-drift tube accelerators, orbital accelerators-cyclotrons, the Synchro cyclotron, Bending and Focussing magnets-The magnetic spectrometer. Production of high energy neutrons.

Detectors-Ionization Chamber technique, G.M. Counter, scintillation detector, Emulsions, neutron detectors.

In general the scope of the syllabus is defined by Chapters 5, 6 and 7 for unit I and II Chapters 2, 3 and 4 for unit V and by Chapters 9, 10 and 11 for unit III and IV of the book entitled "Elements of Nuclear Physics" by W.E. Burcham published by Longman 1979.

7

Raj *Jain*
Dy. Registrar
(Academic)
University of Rajasthan
JAIPOUR

Syllabus : B.Sc. (Hons.) Part-III

The related examples given at the end of aforesaid chapters of book by Burcham may be done as illustrative exercises for practice.

Further books suggested for reference :

1. Nuclear Physics : Irving Kaplan
2. Concepts of Nuclear Physics : B.L. Cohen
3. Introductory Nuclear Physics : Kenneth S. Krane
4. Introduction to Nuclear Physics; CMH. Smith
5. Nuclear Physics, S.N. Ghoshal
6. Introduction to High Energy Physics, Perkins,

Paper-XI : Physics of Materials

Note : Five questions are to be set taking one from each unit (each question will have an internal choice). Student will attempt all the five questions. 40% weightage will be given to problems and numericals.

Unit-I

Introduction : Materials Science and engineering, classification of engineering materials, levels of structure, structure-property relationships in materials.

Crystal Geometry and Structure Determination : Space lattices, Space lattices and crystal structures, Crystal directions and planes, Bragg's law of X-ray diffraction, Powder method, structure determination. Extinction rules for cubic crystals.

Structure of Solids : Crystalline and non-crystalline states, Discussion of solidification and crystallization, glass transition.

Polymers : Classification of polymers, structure of long chain polymers, crystallinity of long chain polymers.

Unit-II

Chemical Bonding in Solids : Bond energy, bond type and bond length, Ionic bonding, Calculation of lattice energy of ionic crystals. Madelung constant, covalent bonding, Metallic bonding, Secondary bonding, Variation in bonding character and properties.

Phase diagrams : Covalent solids, Metals and alloys, Ionic solids. Phase rule, Single component systems, Binary phase diagrams, Level rule.

Unit-III

Band Theory of Solids : Formation of bands (qualitative discussion), Electrons in a period field of a crystal (Krong-Penney Model), Brillouin zones, number of states in a band, Bloch Theorem and Bloch function.

Raj Vas

Dy. Registrar
(Academic)
University of Rajasthan
JAIPUR

University of Rajasthan

Dispersion relation inside a band, band shapes, effective mass of an electron, Distinction between metals, insulators and intrinsic semi-conductors.

Lattice Vibration and Thermal Properties of Solids : Lattice vibrations, Linear monoatomic and diatomic chains, Acoustic and Optical photons, Normal modes, Spectral distribution function, Einstein and Debye Theories of specific heat solids, contribution from electron gas in metals, Thermal conductivity of metals.

Unit-IV

Electrical conductivity : Equilibrium state of electron gas in a conductor in the absence of electric field, electron drift in an electric field, relaxation time and mean free path, electrical conductivity of electron gas, Wiedmann-Franz law, Temperature dependence of electrical conductivity of pure metal. Hall effect and determination of density and mobility of charge carriers in semi conducting materials.

Dielectric Properties : Polarization, Temperature and frequency effect. Electric break down, classical theory of electronic polarizability, Normal and anomalous dispersion, Complex dielectric constant and loss, Ferroelectric materials, Measurement of dielectric constant and loss. P-E hysteresis loop in ferroelectricity.

Qualitative discussion of pyroelectric and piezoelectricity.

Unit-V

Magnetic Properties : Response of substances to magnetic field, dia, para and ferri and ferromagnetic materials. Magnetic moment of atom, orbital part, spin part and total magnetic moment, Langevin's theory of dia- and paramagnetism. Ferromagnetism and related phenomena, domain structure, hysteresis loops. Measurement of magnetic permeability and B.H. hysteresis Soft and hard materials.

Superconductivity : Introduction, Survey of superconductivity. Mechanism of superconductivity, Effect of magnetic field, Meissner effect, Type I and Type II superconductors, Thermal conductivity, Penetration depth. Energy gap and specific heat, Isotope effect, application of superconductivity.

Reference Books :

1. Materials Science and Engineering by V. Raghavan, Prentice-Hall Edition 1993.

9

Raj / Taj

Syllabus : B.Sc. (Hons.) Part-III

2. Solid State Electronic Engineering Materials by S.O. Pillai, Wiley Eastern Ltd.
3. Solid state Physics by C. Kittel V: Edition.
4. Introduction to Solid by L. Azaroff.
5. Solid State Physics by N.W. Aschroft and N.D. Mermin CBS Publishing Asia Ltd.

Paper-XII : Atomic and Molecular Physics

Note : Five questions are to be set taking one from each unit (each question will have an internal choice). Student will attempt all the five questions. 40% weightage will be given to problems and numericals.

Unit-I : Monovalent and Divalent Atoms

Background from quantum theory : The four quantum numbers; spectral terms arising from L-S coupling, s,p,d,f notation, Matrix elements of dipole moment selection rules, emission and absorption probabilities, Half life of excited states; width of a spectral line-natural, Doppler and others, Spectra of mono and divalent atoms; Doublet fine structure of hydrogen lines; screening constants for monovalent atoms, series limits, doublet structure of alkali spectrum, spectra of helium and alkaline earth atoms, singlet and triplet series, Isotope effect and deduction of m/M from hydrogen and deuterium spectra.

Unit-II : Magnetic Field effects and x-ray spectroscopy

Effect of magnetic field on energy levels: Gyromagnetic ratios for orbital and spin moments; vector model, J-J coupling, Lande g factor, strong and weak field effects, illustrative cases of H, Na, Ca, and Hg. X-ray spectra : The continuous X-ray spectrum; Duane and Hunt limit. Characteristic X-rays; Moseley's law, doublet fine structure, H-like character of X-ray energy states, X-ray absorption spectra, absorption edges. Qualitative discussion of near edge and extended fine structure; determination of atomic number of atoms.

Unit-III : Diatomic Molecules

Sharing of electrons, formation of molecular orbitals, qualitative discussion of H_2 ion, H_2 molecule, Electronic levels and quantum numbers for electronic states of diatomic molecules: singlet and triplet

Dy. Registrar
(Academic)

University of Rajasthan
JAIPUR

University of Rajasthan

characters. Rotational energy levels, internuclear distance, Vibrational energy levels, force constants, anharmonicity, dissociation energy, isotope effect on rotational and vibration energies. Spectra of diatomic molecules : Pure rotation spectra: selection rules. Vibration rotation spectra: selection rules, P, Q, and R branches, Electronic band system, sequences and progressions, Franck-Condon principle.

Unit-IV : Triatomic Molecules

Triatomic molecules : Normal modes of a triatomic molecule; selection rules for infrared absorption, Raman effect : Raman shifts, Stokes and anti-stokes lines, selection rules in Raman spectra. The structure of H_2O , CO_2 and N_2O Molecules from IR and Raman spectra, Laser as intense source for Raman excitation.

Unit-V : Experimental Techniques

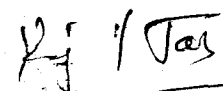

Emission spectroscopy : Emission sources, prism grating and crystal spectrographs, Prism material useful for UV, V and IR regions, constant deviation systems. Concave grating, different types of mountings, monochromators, resolution and dispersion in various spectrographs, high resolution spectroscopy, Fabry-Perot and Lummer plate in high resolution.

Absorption spectroscopy : Continuous sources for absorption studies in X-ray, UV, V and IR region, single-beam and double-beam instruments, detection systems-photographic plate, photomultiplier tube, bolometer. Laser techniques : Laser imaging of objects, burnable lasers for high resolution spectroscopy, pulsed lasers for time resolved spectroscopy.

JALPUR

Syllabus : B.Sc. (Hons.) Part-III

List of Physics Practicals

Max. Marks : 100

Min. Pass Mark : 40

Duration : Two Practicals of five hours duration each spread over two days.

The students are expected to perform 15 experiment in academic session, the suggested list of experiments is given below. The institution may, however, set other experiments of the equivalent level and may communicate the same to the Convener. Board of Studies.

1. Determination of Planck constant by photo cell (retarding potential method using optical filter, preferably five filters).
2. Determination of Planck's Constant using solar cell.
3. Determination of Stefan's Constant (B-B method).
4. Study of Iodine spectrum with the help of grating and spectrometer and ordinary bulb light.
5. To find the magnetic susceptibility of a paramagnetic solution using Quincke's method. Also find the ionic molecular susceptibility of the ion and magnetic moment of the ion in terms of Bohr magnetrons.
6. Study of polarization by reflection from a glass plate with the help of Nicol Prism, and photo cell and verification of Brewster's Malu's law.
7. e/m measurement by Helical method.
8. Measurement of electric charge by Millikan's oil drop method.
9. Study of the characteristic of a GM counter and verification of inverse square law for the same strength of radio active source.
10. Study of random process and statistical distribution using GM counter.
11. Study of β -absorption in Al foil using GM counter.
12. Study of gamma ray spectra using scintillation spectra meter.
13. Study of Bremsstrahlung by electrons of 100 KeV to 2 MeV energy using scintillation spectrometer.
14. Scintillation spectroscopy of Beta radiation.
15. Study of excitation of characteristic X-rays by electron.
16. Study of X-ray absorption with GM counter.
17. Study of parametric amplifier.
18. Study of normal modes and dispersion relation in a beaded string.

2. CHEMISTRY

Scheme:

Max Marks: 400

	Duration (hrs)	Max. Marks	Min. Pass Marks
Paper IX	3	75	
Paper-X	3	75	120
Paper-XI	3	75	
Paper-XII	3	75	
Practical	10	100	40

Note: Each paper will contain ten (10) questions having two (02) questions from each unit. Candidates are required to attempt five (05) questions in all selecting one (01) question from each unit.

Paper-IX Inorganic Chemistry (4 hrs. / Week)

Unit-I

Metal-Ligand bonding:

- Limitations of crystal field theory, molecular orbital theory of octahedral, tetrahedral and square planar complexes, π -bonding and molecular orbital theory.
- Organometallic Compounds: definition and classification of organometallic compounds, synthesis, properties and structures of organometallic compounds of magnesium, aluminium, tin and lead.
- Metal Carbonyls: preparation, properties and bonding of transition metal carbonyls. Detailed study of mononuclear and polynuclear carbonyls.

Unit-II

Inorganic Polymers:

- Types of inorganic polymers, comparison with organic polymers, synthesis, structural aspects and applications of silicones, phosphonitric halides and condensed phosphates.
- Metal Clusters: Higher boranes, carboranes, metallaboranes and metallocarboranes, metal carbonyl and halide clusters, compounds with metal-metal multiple bonds.

Unit-III

Nuclear Chemistry:

- Fundamental particles of nucleus (nucleon), concept of nuclides, Representation of nuclides, isotopes, isobars and isotones with specific examples. Applications of radioisotopes, size concept in nucleus and atom. Qualitative idea of the stability of nucleus (n/p ratio).
- Nuclear Chemistry-II: Shell and liquid drop model, natural and artificial radioactivity, disintegration series, disintegration rates, half life, average life, nuclear binding energy, mass defects, Einstein's mass energy relations, artificial transmutation, nuclear reactions, spallations, nuclear fission and fusion, nuclear reactors, Hazards of radioactive emanations.

Unit-IV

Bioinorganic Chemistry:

13

Raj / Jais
Dy. Registrar
(Academic)
University of Rajasthan
JAIPUR

- (a) Role of bulk and trace metal ions in biological systems with special reference to Na, K, Mg, Ca, Fe, Cu and Zn.
- (b) Metalloporphyrins: Chlorophylls and their role in photosynthesis. Hemoglobin and Myoglobin and their role as oxygen carriers.

Unit-V

Nitrogen fixation: Mechanism, nitrogenase enzyme, dinitrogen complexes as models for nitrogen fixation.

Metalloenzymes: General discussion of enzymes, functions of metal ions, inhibition (explanation based on coordination chemistry), carboxypeptidase-A and cytochrome-C.

Books Suggested:

1. Manfred Bochmann, Organometallics 1: Complexes with transition Metal-Carbon σ -bonds (Oxford Chemistry Primers).
2. Manfred Bochmann, Organometallics 2: Complexes with transition Metal-carbon π -bonds; (Oxford Chemistry Primers).
3. R.C. Mehrotra and A. Singh, Organometallic Chemistry.
4. Christoph Elschenbroich, Albrecht Salzer, Organometallics: A Concise Introduction.
5. J.E. Huheey, Inorganic Chemistry.
6. F.A. Cotton and G Wilkinson, Advanced Inorganic Chemistry.
7. D.F. Shriver and P.W. Atkins, Inorganic Chemistry.
8. R. Sarkar and Nityanand Saha, General and Inorganic Chemistry (Hon. Consulting Editor).
9. James E. Mark, H.R. Allcock and Robert West, Inorganic Polymers (2nd Edn).
10. M.F. Lappert and G.J. Leigh, Developments in Inorganic Polymer Chemistry.
11. H.J. Arnika, Essentials of Nuclear Chemistry.
12. G. Friedlander and J.W. Kennedy, Nuclear and Radiochemistry.
13. S. Glasston, A Source Book on Atomic Energy.
14. A.V.S. Rama Rao, A Text Book of Biochemistry.
15. A.C. Deb, Fundamentals of Biochemistry.
16. M.N. Hughes, Inorganic Chemistry of Biological Processes.
17. Smith et.al, Principles of Biochemistry.
18. Christopher K. Mathews, Kensal E. van Holde and Kevin G Abern, Biochemistry (2nd Edn).

Paper-X: Organic Chemistry

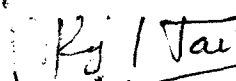

(4 Hrs. / Week)

Unit-I

Heterocyclic Compounds: Nomenclature, Five and Six membered heterocyclic compounds, Aromatic Character, preparation, reactions, chemical reactivity, orientation (Electrophilic and nucleophilic substitution reaction) basicity of pyrrole, furan, thiophene and pyridine. Condensed five and six membered heterocycles, structure, preparation and reactions of indole, quinoline and isoquinoline.

Polynuclear Compounds: Structure of naphthalene, mechanism and orientation of electrophilic substitution in naphthalene, preparation and properties of naphthalene and anthracene, some

14

Dr. Registrar
 (Academic)
 University of Rajasthan
 JAIPUR

Important derivatives of naphthalene, like naphthols and naphthylamines. Preparation and reaction of diphenyl, diphenylmethane and triphenylmethane.

Unit-II

Synthetic Dyes: Color and constitution (electronic concept). Classification of dyes. Chemistry and synthesis of Methyl orange, Congo red, Malachite green, Crystal violet, Phenolphthalein, Fluorescein, Alizarin and Indigo.

Drugs: Chemotherapy, synthetic uses and side effects of:

Analgesics: Aspirin, Phenacetin, Paracetamol.

Antimalarials: Chloroquine, Plasmoquine.

Antibiotics: Chloramphenicol (Chloromycetin).

Sulpha drugs and their mechanism of action, Synthesis of sulphadiazine, sulphapyridine, sulphathiazole, sulphaguanidine and sulphamethazole.

Polymers and polymerization: Addition and condensation polymerization, their mechanism, copolymerization, coordination polymerization, Ziegler-Natta catalyst, plastics, thermoplastic and thermosetting resins, plasticizers, polystyrene, PVC, polyacrylates, polyacrylonitrile, dacron, terylene, nylon-66, bakelite, melamine and polyurethanes. Elementary idea of the stereochemistry of polymers. Synthetic and natural rubber.

Unit-III

Amino Acids, Peptides and Proteins: Classification, structure and stereochemistry of amino acids, physical properties, zwitter ion structure, isoelectric point and electrophoresis. Preparation and reaction of α -amino acids.

Structure and nomenclature of peptides and proteins. Classification of proteins, peptide structure determination, end group analysis, selective hydrolysis of peptides. Classical peptide synthesis; solid-phase peptide synthesis. Structure of peptides and proteins. Levels of protein structure. Protein denaturation/renaturation.

Nucleic acids: Introduction, constitution of nucleic acids (RNA and DNA). Ribonucleosides and ribonucleotides. The double helical structure of DNA.

Unit-IV

Carbohydrates: Introduction, classification, constitution and reaction of glucose and fructose, mutarotation and its mechanism, cyclic structure, pyranose and furanose forms, Haworth projection formulae, configuration of monosaccharides, determination of ring size, conformational analysis of monosaccharides, Epimerization, chain lengthening and chain shortening in aldoses. Interconversion of aldoses and ketoses.

Disaccharides: Structure determinations of maltose, lactose and sucrose.

Polysaccharides: Structure of starch and cellulose.

Organometallic Compounds: Organomagnesium compounds: The Grignard reagents-formation, structure and chemical reactions.

Organozinc compounds: Formation and chemical reactions.

Organolithium compounds: Formation and chemical reactions.

Unit-V

Mass Spectrometry: Introduction, instrumentation, factors affecting fragmentation, ion analysis, ion abundance, fragmentation modes, mass spectral fragmentation of simple organic compounds:

15

Pj / Jas
Dy. Registrar
(Academic)
University of Rajasthan
JAIPUR

alkanes, primary alcohols, aliphatic ketones, aldehydes and carboxylic acids. Types of peak: molecular ion peak, isotopic peak, base peak, metastable peak, doubly charged ion, Mc Lafferty rearrangement, retro Diels-Alder fragmentation, Nitrogen rule.

Reference Books:

7. P.S. Kalsi; Spectroscopy of Organic Compounds; Sixth Edition; New Age International (P) Ltd. Publishers, New Delhi.

Paper XI: Physical Chemistry

(4 Hrs. / Week)

Unit - I

Quantum Mechanics:

Schrodinger's wave equation for particle in three dimensional box, H-atom, quantum number and their importance, H like wave functions, radial wave functions, angular wave functions.

M.O. theory, basic ideas - criteria for forming M.O. from A.O., Construction of M.O.'s by LCAO- H_2^+ ion, calculation of energy levels from wave functions from energy levels from wave functions, physical picture of bonding and anti-bonding wave functions, concept of σ , σ^* , and π , π^* orbitals and their characteristics. Hybrid orbitals- sp , sp^2 , sp^3 , calculation of co-efficient of A.O.'s used in these hybrid orbitals. Introduction to Valence bond model of H_2 , comparison of M.O. and V.B model.

Unit - II

(a) Photochemistry:

Interaction of radiation with matter, difference between thermal and photochemical processes. Laws of photochemistry: Grothus-Draper law, Stark-Einstein law, Jablonski diagram depicting various processes occurring in the excited state, qualitative description of fluorescence, phosphorescence, non-radiative processes (internal conversion, intersystem crossing), quantum yield, photosensitized reactions-energy transfer processes (simplex examples).

(b) Physical Properties and Molecular Structure

Optical activity, polarization (Calusius-Mossotti equation), orientation of dipoles in an electric field, dipole moment, induced dipole moment, measurement of dipole moment temperature method and refractivity method, dipole moment and structure of molecules, magnetic properties: paramagnetism, diamagnetism and ferromagnetic.

16

Rj / Jas
Dy. Registrar
(Academic)
University of Rajasthan
JAIPUR

Unit - III

Electrochemistry:

Types of reversible electrodes: Gas-metal ion, metal-metal ion, metal-insoluble salt-anion, and redox electrodes, electrode reactions, Nernst equation, derivation of cell E.M.F. and single electrode potential. Standard hydrogen electrode, reference electrodes, electrochemical series and its significance.

Electrolyte and galvanic cells - Reversible and irreversible cells, conventional representation of electrochemical cells. E.M.F. of a cell and its measurements. Computation of cell e.m.f. Calculation of thermodynamic quantities of cell reactions (ΔG , ΔH and K), Polarization, Overpotential and Over Voltage. Structure of double layer, theories by Helmholtz, Guoy-Chapman and Stern. Concentration cell with and without transport, liquid-junction potential, application of concentration cells, valency of ions, solubility product and activity coefficient, potentiometric titrations. Determination of pH using hydrogen, quinhydrone and glass electrodes, by potentiometric methods. Introduction of polarographic technique.

Classification of electrochemical cells, requirement of power source, lead storage cell and fuel cell.

Corrosion: types, theories and method of combating corrosion.

Unit - IV

Macromolecules: Linear branches network and homopolymer. Polymer classification-condensation polymer and addition polymers, number average and weight average, molecular weight determination methods of polymers by (1) osmotic pressure, (2) viscosity, (3) light scattering. Properties of macromolecules.

Chemical Kinetics: The simple catalysis mechanism $S + C \rightarrow SC \rightarrow P + C$. Its mathematical treatment and its consequences. Specific and general acid-base catalysis, enzyme catalysis, surface catalysis and Langmuir adsorption isotherm, mechanism of surface catalysis.

Unit - V

Phase Equilibrium:

Solid solutions: Compound formation with congruent melting point (Mg-Zn) and benzophenone-dimethylamine, incongruent melting point NaCl-H₂O, picric acid and benzene, FeCl₃ - H₂O and CuSO₄ - H₂O system.

Liquid-Liquid Mixtures: Ideal liquid mixtures, Raoult's law and Henry's law, non - ideal system, Azeotropes HCl-H₂O and ethanol-water system.

Particularly miscible liquids: Phenol-water, Trimethylamine-water, Nicotine-water system, Lower and upper consolute temperature, effect of impurities on consolute temperature.

Immiscible liquids - Steam distillation.

Surface phenomenon, Micelles: surface active agents, classification of surface active agents, micellization, hydrophilic interaction, critical micellar concentration (CMC), factors affecting CMC of surfactants, counter ion binding to micelles, thermodynamics of micellization. Phase separation and mass action models, solubilization, micro emulsion, reverse micelles.

Adsorption: Gibbs adsorption isotherm, estimation of surface area (BET equation), surface films on liquids (electro kinetic phenomenon), catalytic activity at surface, electrode/electrolyte interface.

Suggested Books:

1. Physical Chemistry by S. Glasston.
2. Micelles: Theoretical and applied aspects Yoshikiyo Moroi, Springer Publications.
3. Modern Aspects of Electrochemistry (Vol. I & II), A.K.N.Reddy, Plenum Press, New York.
4. Physical Chemistry, Puri, Sharma and Pathania, Vishal Publication.
5. Physical Chemistry, Behl & Tuli, S.Chand Publication, Delhi.
6. Introduction to Polarographic and Allied Techniques, K Zutshi, New Age International Publication.
7. Introduction to Polymer Science, V.R.Gowariker, N.V.Vishwanathan & J.Shridhar, Wiley Eastern.

Paper XII: Analytical Chemistry
(4 Hrs. / Week)

Unit-I

Electrogravimetry: Theory, electrode reactions, overpotential, completeness of deposition, electrolytic separation of metals, character of the deposit and electrolytic separation of metals with controlled cathode potential. Electrolytic determinations at constant current— Copper and Lead. Electrolytic determinations with controlled cathode potential— Antimony, copper, lead and tin in an alloy.

Coulometry: Coulometry at controlled potential, separation of Ni and Co by coulometric analysis at controlled potential, coulometry at constant current, coulometry titrations.

Unit-II

Polarography: Principle and experimental set-up. Diffusion current and Half-wave potential— Qualitative and quantitative applications of polarography in analytical chemistry.

- (i) Wave height concentration graph.
- (ii) Internal standard (piloton method)
- (iii) Standard addition method.

Use of polarography in: (i) Zn and Cu in brass
(ii) Dissolved oxygen in sample.

Amperometry: Amperometric titrations, technique of amperometric titrations with the dropping mercury electrode, titration with the rotating platinum micro electrode, biamperometric titrations.

Modified Voltammetric methods: Current sampled (TAST) Polarography, Pulse polarography, Differential pulse polarography, Cyclic Voltammetry, Sinusoidal Alternating current polarography, Stripping Voltammetry.

Unit-III

Mass spectrometry: Instrumentation and technique, Elementary idea about electron impact, chemical ionization and matrix assisted laser desorption ionization (MALDI), mass spectrometer techniques. Principle of fragmentation, molecular ion peak, base peak, isotopic peaks and metastable ion peak. Determination of molecular formula, mass spectra of alkanes, alkenes, alkynes, cycloalkanes and arenes, alcohols and ethers, aldehydes and ketones.

Gas Chromatography and HPLC: Introduction, gas chromatographs, detectors, programmed temperature gas chromatography, quantitative analysis by GLC, gas—solid chromatography. High performances liquid chromatographic methods— Adsorption Chromatography. Liquid-

18

Rej / Tas
Dy. Registrar
(Academic)
University of Rajasthan
JAIPUR

liquid partition chromatography, Ion exchange, HPLC, exclusion chromatography.

Unit-IV

Diffraction Pattern: Fundamental, principles, instrumentation, use of x-ray, electron and neutron in diffractometry and applications of x-ray, electron and neutron diffractometry in biological and as analytical techniques. Applications of x-rays in C.T. scan.

Unit-V

Automated Methods of analysis: Automatic instruments and automation. Automation of sampling and preliminary sample treatment for air, water and soil, continuous flow method. Discrete methods, Automatic Analysis based on Multilayer Films.

NMR Spectroscopy: Theory of nuclear magnetic resonance, experimental methods of NMR spectroscopy, applications of proton NMR including applications in MRI technique.

Suggested Books:

1. D.A. Skoog, D.M. West and F.J. Holler, Fundamentals of Analytical Chemistry.
2. A.I. Vogel, Analytical Chemistry.
3. H.H. Willard, L.L. Merritt, J.A. Dean and F.A. Settle, Instrumental Methods of Analysis.
4. GR. Chatwal and S.K. Anand, Instrumental Methods of Chemical Analysis.
5. I.M. Kollthop, Analytical Chemistry.

B.Sc.(HONS.) PART-III CHEMISTRY PRACTICALS

(8 hrs or 12 periods /week) (Spread in four days)

INORGANIC CHEMISTRY

1. Qualitative analysis of mixture containing six radicals one of which should be a rare ion. The mixture may contain radicals of any combination including interfering acid radicals and insolubles.
2. Quantitative estimation of *any three* of the following mixture by volumetric and gravimetric methods.
 - a) Copper-Zinc
 - b) Zinc-Nickel
 - c) Silver-Copper
 - d) Silver-Nickel
 - e) Silver-Zinc
 - f) Copper-Nickel
3. Inorganic Preparations and its characterization (*any four*) and characterization of coordination compounds:
 - a) Bis (dimethylglyoximate) nickel (II) complex
 - b) Tetraamminecopper (II) sulphate
 - c) Potassium *cis*-diaquabis(oxalato)chromate (III) dihydrate
 - d) Hexamminenickel (II) chloride
 - e) Prussian blue
 - f) Chloropentaamminecobalt (III) chloride
 - g) Carbonatotetraamminecobalt (III) nitrate
4. Analysis of (*any three*) of the following
 - a) Available chlorine in bleaching powder.

19

Rijl Tai
Dy. Registrar
(Academic)
University of Rajasthan
JAIPUR

- b) Water analysis for total hardness.
- c) Analysis of two components.
- d) Analysis of cement for Ca, Al or Mg.
- e) MnO_2 in pyrolusite.

ORGANIC CHEMISTRY

1. Quantitative Estimations
 - a) Determination of neutralization equivalent of an organic acid.
 - b) Determination of Saponification value of an ester/oil.
 - c) Estimation of glucose by titration with Fehling's solution/ Benedict solution.
2. Qualitative analysis
Analysis of an organic mixture containing two solid components using water, NaHCO_3 and NaOH for separation and preparation of suitable derivatives.
3. Two step preparations of simple compounds-the students are expected to perform at least three of the following preparations.
 - a) Preparation of p-aminoazobenzene from aniline.
 - b) Preparation of p-nitroaniline from acetanilide.
 - c) Preparation of syn-tribromobenzene from aniline.
 - d) Preparation of m-nitroaniline from nitrobenzene.
 - e) Preparation of acetanilide from acetophenone (Beckmann rearrangement).
 - f) Preparation of anthranilic acid from phthalic anhydride.
 - g) Preparation of eosin from phthalic anhydride.

PHYSICAL CHEMISTRY

- (A) Potentiometry (Multimeters may be used)
 1. To find out the strength of acid by titrating it against alkali.
 2. Determination of dissociation constant of weak acids.
 3. Determination of number of electrons involved in a cell reaction by setting up a concentration cell.
 4. Determination of transport number of anion by e.m.f. measurements.
- (B) pH metric titrations:
 1. To find out the strength of strong acid by titrating it against strong base.
 2. To find out the strength of strong acid by titrating it against weak base.
 3. To find out the strength of weak acid by titrating it against strong base.
 4. Find out the strength of HCl and CH_3COOH in a mixture of both by titrating it against NaOH .
- (C) Spectrophotometer experiment or Colourimetric experiment
 - a) Verify Lambert Beer Law & determine the concentration of the given aqueous solution of unknown concentration of salt.
- (D) Kinetics:
 1. Determine the effect of ionic strength on the rate of persulphate iodide reaction.
 2. Determination of molecular weight by Rast Camphor method.
 3. Determination of concentration of given solution of H_2SO_4 acid by measuring heat changes during dilution.
 4. Compare cleaning power of two samples of detergents by surface tension measurement.

3. ZOOLOGY(HONS.)

B.Sc. (Hons.) Part –III – 2020

Scheme

Paper XIII	: Ecology	Max. marks	50
Paper XIV	: Environment Biology	Max. marks	50
Paper XV	: Development Biology	Max. marks	50
Paper XVI	: Evolution	Max. marks	50
Paper XVII	: Applied Zoology-1	Max. marks	50
Paper XVIII	: Applied Zoology-2	Max. marks	50
Practicals	: 2 days (8 hrs.)	Max. marks	100

Scheme of Examination

Max. Marks: 50

1. There will be 5 Question in each paper. All questions will be compulsory and carry equal marks.
2. Question number 1 will comprise 10 very short answer (maximum 25 words) type questions, each of 1 mark. Questions should be evenly distributed covering entire syllabus.
3. Each paper is divided into four units/sections. There will be one question from each unit/section. The question number 2 to 5 will have internal choice.

Seminars, posters, models, educational tour reports, practical record etc. will carry internal marking which will be added in the practicals.

Paper XIII: Ecology

Section - A

1. Aim and scope of Ecology.
2. Concepts of limiting factors.
3. Ecosystem: Abiotic and biotic factors.
4. Competition in nature-Intraspecific and interspecific, predation and parasitism-concept, evolution of prey-predator strategies, evolution of parasitism, host parasite relationship: Commensalism and mutualism.
5. Ecosystem: Production, consumption and composition in an ecosystem: Concepts of food chain food web, trophic structure, ecological pyramids, Biogeochemical cycles: O₂, CO₂ H₂O, N & P and role of microbes.

22

Dy. Registrar (Academic-I)
University of Rajasthan
Jaipur

Section - B

6. Ecosystem homeostasis, functional aspects, productivity concepts and its determination, ecotone, edge effect and niche.
7. Population ecology: population characteristics, growth and its analysis, regulation of densities, density and methods of its measurement, natality, mortality, age ratio and distribution, pyramids, fluctuation, biotic potential, dispersal, growth forms, population interactions & propagation and brief idea of demography.

Section - C

8. Community ecology: Characteristics of natural communities, structure, composition and stratification.
9. Ecological succession: Types and patterns, concept of climax, details of xerosere and hydrosere successions.
10. Habitat ecology: Fresh water, marine, terrestrial and estuarine water.

Section - D

11. Major biomes of the world: Desert, grassland, tundra, temperate, tropical moist forest and seasonal forest.
12. Ecology and human future: Growth rate, role of human kind in modifying natural communities.

Paper-XIV: Environmental Biology

Section - A

1. Environmental and its concept, global environment, hydrosphere, lithosphere, atmosphere and biosphere.
2. Natural resources: Present status and future needs.
3. Management of natural resources: Renewable (Forests, wildlife & water) and non renewable (Water, soil, minerals and energy).

Section - B

4. Environmental pollution I: General outline and various types of pollutants. A detailed account of pollution of water, air and soil.
5. Environmental pollution II: Sources and remedies for thermal, noise, radiation industrial chemicals, agrochemicals, insecticides & pesticides and household pollutants. Solid waste Management.

Section - C

6. Green house effect, ozone layer depletion, El Nino and La Nina effects.
7. Radiation and environment: Types of radiation, fall effects and effects of nuclear radiation accidents.
8. Basic concepts of bioaccumulation, biomagnifications and biodegradation of pollutants.

Section - D

9. Wild life conservation: Vanishing and threatened animals and plants with special reference to Rajasthan, wild life management efforts by government and non government organizations.
10. Impact of urbanization: Development and distribution of urban centers, factors, problems and the solutions of urbanization: Brief idea of human population with special reference to India and Rajasthan.
11. Space ecology: Space problems and their solutions, space ecosystem and space colonization.
12. Sustainable environment.

Paper-XV: Development Biology

Section - A

1. Gametogenesis: Spermatogenesis, oogenesis, vitellogenesis and egg membranes.
2. Fertilization: Sperm-egg interactions, biochemical events and post fertilization events.
3. Parthenogenesis.

Section - B

4. Types of animal eggs, patterns of cleavage, fate maps, germ layers, gastrulation and cell lineage.
5. Extra embryonic membranes, types and physiology of placenta.
6. Organizer concept and induction process.

Section - C

7. Organogenesis of heart, kidney, nervous system and sense organs.
8. Post-embryonic developments: Insects and amphibians.
9. Regeneration in invertebrates and vertebrates.

24

Dy. Registrar (Academic-I)
University of Rajasthan
Jaipur

Section - D

10. Various types of stem cells and applications (with special reference to embryonic stem cells).
11. Cloning of animals: Nuclear embryonic transfer techniques, nuclear transfer techniques and embryonic or therapeutic cloning.
12. Teratological effects of xenobiotics.
13. Ageing: Concepts and models.

Paper-XVI: Evolution

Section - A

1. Concept of evolution.
2. Origin of life on earth.
3. Origin of prokaryotic and eukaryotic cells.

Section - B

4. Variations, mutations, recombination, ploidy isolation, natural selection: evolution in action.
5. Concept of species and speciation.
6. Molecular phylogeny: Phylogeny of horse.
7. Molecular drive.

Section - C

8. Adaptations: Mimicry.
9. Polymorphism: Population genetics, genetic drift and Hardy-Weinberg law.
10. Macro- and micro-evolution, evolution of man.

Section - D

11. Zoogeography: Principles and concepts of parallelism, endemism etc and factors influencing animal distribution.
12. Zoogeographical realms and faunal peculiarities, evolution of realms, plate tectonics & continental drifts and island zoogeography.

25

Ry' / Tas
Dy. Registrar (Academic-I)
University of Rajasthan
Jaipur

Paper-XVIII: Applied Zoology-1

Section - A

1. The scope and history of microbiology.
2. Major characteristics of microorganisms.
3. Microbial classification, nomenclature and identification.

Section - B

4. Bacteria: Morphology, fine structure, cultivation, reproduction & growth, pure culture and characteristics.
5. Bacterial nucleic acids.

Section - C

6. The world of bacteria- Classification, morphology and characteristics: Gram negative bacteria (*Pseudomonas*, *E.coli*, *Acetobacter*, *Nitrobacter* & *Thiobacter*), Gram positive bacteria (*Lactobacillus* & *Enterococcus*), bacteria with unusual properties and Gram positive filamentous bacteria (*Actinomyces*).
7. Microorganisms: General characteristics of fungi (molds and yeast), algae, protozoa and viruses.
8. Medical Zoology: Role of normal flora, Normal flora as pathogens, brief introduction to pathogenic microbes, viruses (Pox virus, Herpes virus, Adenovirus, Hepatitis virus, HIV & AIDS virus), rickettsia, spirochetes, staphylococcus, streptococcus, pneumococcus, haemophilus, *Mycobacterium tuberculosis* and clostridium.

Section - D

9. Brief account of life history, mode of infection and pathogenicity: *Entamoeba*, *Trypanosoma*, *Leishmania*, *Plasmodium*, *Wucheria* and *Dracunculus*.
10. Arthropods as vectors of human diseases: Malaria, Dengue, Filariasis, Japanese encephalitis and Plague.

Paper-XVIII: Applied Zoology-2

Section - A

1. Bacteria and genetic engineering (outline idea only): Benefits of genetic engineering, potential hazards and regulations of genetic engineering.
2. Enzymology of genetic engineering: Restriction enzymes, DNA ligase and polymerase.
3. Monoclonal antibodies and their applications.

26

Dy. Registrar (Academic-I)
University of Rajasthan
Jaipur

4. Analysis and expression of cloned gene in the host cells: Southern blotting, Northern blotting, *In-situ* hybridization, PCR (Polymerase chain reaction) and DNA finger printing.

Section - B

5. Protoplast fusion in prokaryotes and eukaryotes.
6. Cloning vehicles: Plasmids, cosmids, lambda phage, charon phage, shuttle vectors, DNA plasmids and yeast plasmids.
7. Introduction of cloned genes into the host cells: Transformation and transduction.
8. Medical biotechnology: Gene therapy.

Section - C

9. Transgenic animals and their uses.
10. Brief account of cloning: Genomic research, its advantages and disadvantages.
11. Biotechnology in medicine (outline idea only): Antibiotics, vaccines, enzymes, vitamins, steroids and artificial blood.

Section - D

12. Environmental biotechnology (outline idea only): metal and petroleum recovery, pest control and waste –water treatment.
13. Food, drinks and dairy biotechnology (outline idea only): Microbial spoilage and food preservation, fermented food production: dairy products, alcoholic beverage and vinegar.

University of Rajasthan

Syllabus: B.Sc. Zoology (Hons.) Part-III

Min. Marks 40

8 hrs. /week

Max. Marks: 100

Practicals

I. Analysis of environmental components

1. Soil pH.
2. Water analysis: pH, alkalinity, acidity dissolved oxygen, free CO₂ and salinity (chlorides).
3. Study of phyto-and –zoo-planktons in the given water sample.
4. Quantitative estimation of zooplanktons in the given water sample
5. Simple methods to measure population density.
6. Field study of any one of the following habitats: Freshwater/lake/pond/ river or desert.

27

Rj / Tas
Dy. Registrar (Academic-I)
University of Rajasthan
Jaipur

II. Development Biology (with the help of models /charts/CD-ROM's/ high resolution picture/video's etc.)

Study of frog/toad development:

1. Egg, cleavage, blastula, gastrula, neurala, tail bud, mature tadpole larva, metamorphic stages and froglet/toadlet.
2. Histological slides: Cleavage, blastula, gastrula, neurula and tail bud.
3. Study of living tadpole larva and its metamorphosis.

Study of Chick development:

1. Whole mounts: 18 hrs, 21 hrs, 24 hrs, 33 hrs 48hrs, 72 hrs and 98 hrs of incubation.
2. Study of chick development through window and blastoderm mounting.
3. Study of various foetal envelopes in a 10-12 day chick embryos (amnion, chorion, allantois and yolk sac).

III. Evolution

1. Study of evolution of man with help of models.
2. Numerical problems based on population genetics.

IV. Applied Zoology-1

1. Preparation and use of culture media for microbes.
2. Study of microbes in food material (curd and milk).
3. Preparation of bacterial culture (water, air, soil/sludge)-Spread plate and streaking method.
4. Preparation of bacterial slides (water, air soil/sludge) (simple stain, negative stain & differential stain): Gram positive bacteria, Gram negative bacteria and Gram positive filamentous bacteria.
5. Preparation of culture media for fungus and its identification.
6. Study of microscopic slides: *Entamoeba*, *Trypanosoma*, *Leishmania*, *Plasmodium*, *Wucheria* and *Dracunculus*.
7. Visit to Dairy/wine processing unit. Submit a report.

V. Applied Zoology-2

1. Isolation of DNA from onion.
2. Genomic DNA isolation from eukaryotic cells (cheek and yeast).
3. Small scale preparation of plasmid DNA.
4. Restriction digestion and agarose gel electrophoresis of genomic DNA and plasmid DNA.

28

University of Rajasthan
Jaipur

B.Sc. Zoology (Hons.) Part-III**Scheme of practical examination and Distribution of marks****8 Hrs. (2 days, 4hrs/day)****Min. marks: 40****Max. marks :100****Ist day****Regular**

1. Environmental Biology	10
2. Biotechnology (Applied Zoology)	10/15
(Marks of the observation and result=05 to be Given the next day if required)	
3. Evolution	10
4. Viva voce	05
5. Class Record	05
6. Seminar/Project Report/Collection	05

IInd day

1. Development Biology	09
2. Biotechnology	05
(Observations and results of the I st day experiment if any)	
3. Microbiology	10
4. Identifications and Comments on spots (1 to 8)	16
5. Viva voce	05
6. Class Record	05
7. Seminar /Project Report/Collection	05

Notes:

1. With reference to whole mounts and museum specimens the animal types may be substituted with diagrams/photographs/models etc.
2. Students will keep records of all work done in the practical records.
3. It should be ensured that animals used in the practical exercises are not covered under the wild life act 1972 and amendments made subsequently.
4. The details methodology may be asked to be written where ever is necessary.

Plant
X - PAPER **L** Biotechnology

UNIT I

Plant Tissue culture

Historical perspective; composition of media; nutrient and hormone requirement; methods of sterilization; totipotency; concept of differentiation, dedifferentiation and redifferentiation; physical-chemical conditions for propagation of plant cells and tissues; Plant regeneration routes: micropropagation, organogenesis and somatic embryogenesis; Anther culture, production of androgenic haploids; protoplast isolation culture and fusion; somatic hybrids & cybrids. Application of Plant Tissue culture.

UNIT II

Recombinant DNA Technology

Introduction, Restriction endonucleases (history, types and role); Other enzymes, Cloning vectors plasmids, bacteriophages, cosmids. Introduction of recombinant DNA into host cells, methods for identification of recombinants, Gel Electrophoresis, PCR; DNA Sequencing (Sanger's method and Maxam Gilbert's method); Southern, Northern and Western blotting; construction of genomic and cDNA library; Introduction to Bioinformatics.

UNIT III

Plant Transformation Technology

(33)

Ry / Tas
Dy. Registrar
(Academic)
University of Rajasthan
JAIPUR

Obtaining gene of interest by different methods; Gene constructs; Gene transfer methods; *Agrobacterium*-mediated transformation; Direct gene transfer methods- Electroporation, Microinjection, Gene-gun; Selection of transgenics - marker and reporter genes.

Role of Plant Biotechnology in Agriculture, Environment and Industry

Pest resistant plants (Bt-cotton); herbicide resistance; disease and stress resistant plants; transgenic crops with improved quality traits (Flavr Savr tomato, Golden rice); Plants as bioreactors. Biosafety regulations in India.

Suggested laboratory exercises:

1. Preparation of media MS (1962)
2. Aseptic culture of different explants, methods of in vitro sterilization, inoculation and subculture methods
3. Study of Genetic engineering Techniques (photographs): PCR, DNA Fingerprinting, DNA Sequencing, Gene gun, Ti plasmid.
4. Demonstration of Southern, Northern and Western Blotting(Photographs)
5. Study of steps of genetic engineering techniques from photographs (Bt cotton, Golden rice, Flavr Savr tomato)
6. Demonstration of technique of Gel Electrophoresis
7. Protoplast Isolation by Enzymatic method.
8. Restriction Digestion of DNA

SUGGESTED READINGS

1. Slater, A., Scott, N.W. & Fowler, M.R. 2008 Plant Biotechnology: The Genetic Manipulation of Plants, Oxford University Press.
2. Bhojwani, S.S. and Razdan 2004 Plant Tissue Culture and Practice.

X Paper Systematics of Angiosperms

Unit I

Taxonomy: introduction, definition, components.
 Herbarium specimen preparation, methods and importance.
 Important herbaria (National, international and digital herbaria).
 Taxonomic literature- botanical gardens, monograph, icones, manuals, journals, abstracts, indices and library
 Keys construction with their types for plant identification.
 Taxonomic nomenclature: taxonomic categories, concept of species, genus and family.
 ICBN: Principles and rules of nomenclature; nomenclature of hybrids and cultivars.
 Phylogeny of angiosperms: Time and place of origin and evolution of angiosperms; primitive living angiosperms.

Unit II

Types of classification – Linnaeus, Bentham and Hooker, Engler and Prantl, Thakreajan and M.G.
 Tools of taxonomy - anatomy, embryology, palynology, ecology, cytology and chemotaxonomy
 Numerical taxonomy - concept, characters, OTU's, coding, cluster analysis and cladistics.

Unit III

Diversity of flowering plants illustrated by members and economic importance of the following families: Ranunculaceae, Brassicaceae, Papaveraceae, Malvaceae,

35

Dy. Registrar
(Academic)

Fabaceae, Caryophyllaceae, Apiaceae, Rubiaceae, Asteraceae, Apocynaceae, Asclepiadaceae, Convolvulaceae, Solanaceae, Acanthaceae, Lamiaceae, Chenopodiaceae, Euphorbiaceae, Liliaceae, Arecaceae and Poaceae.

Suggested laboratory exercises:

Systematics of Angiosperms

Description of the locally available species of the following families & genera.

- Ranunculaceae: *Ranunculus, Delphinium*.
- Brassicaceae: *Brassica, Alyssum, Iberis, Coronopus*
- Capparidaceae: *Capparis, Cleome*
- Caryophyllaceae: *Dianthus, Stellaria, Spargula*.
- Rutaceae: *Citrus, Murraya*.
- Fabaceae: Faboideae: *Lathyrus, Clitoria, Melilotus, Cajanus*
Caesalpinioideae: *Cassia, Caesalpinia*
Mimosoideae: *Prosopis, Mimosa, Acacia*
- Myrtaceae: *Albizia, Eucalyptus*.
- Cucurbitaceae: *Luffa, Coccinia*.
- Apiaceae: *Ferriandrum, Anethum*.
- Rubiaceae: *Hamelia, Mussaenda*.
- Asteraceae: *Fridax, Helianthus, Calendula, Ageratum, Sonchus, Launaea*
- Apocyanaceae: *Thevetia, Nerium, Tabernaemontana*.
- Asclepiadaceae: *Calotropis, Asclepias*
- Solanaceae: *Solanum*.
- Acanthaceae: *Adhatoda*
- Lamiaceae: *Ocimum*
- Euphorbiaceae: *Euphorbia, Pyllanthus, Jatropha*.
- Liliaceae: *Phodinus, Asparagus*.
- Poaceae: *Triticum, Hordeum, Poa*.

* visit a local Botanical garden / Herbarium / National Park / study of local floral biodiversity (Candidates are expected to submit a detailed report of such visit).

Suggested Readings:

X Paper - II Plant utilization and Ethnobotany

UNIT-I

A general account of plants: Primary and secondary centers of diversity plant introduction general account of wheat, rice, maize, sorghum, bajra, sweet potato, beet root and sugarcane. Legumes; Chickpea (Bengal gram), red gram (arhar) black gram and fodder legumes; barseem, alhagi, vegetable plants; potato, tomato, brinjal and cluster bean.

UNIT-II

Vegetable oils: Mustard, groundnut, soybean and coconut a brief account.

Plant fibers: Jute and coir.

Timber and fuel wood species: A general account distribution and uses of shishum, bahoo!

Beverage and medicinal leg

UNIT-III

37

[Signature]
Dy. Registrar
 (Academic)
 University of Rajasthan
 JAIPUR

Medicinal plants: A brief account of ten important plant drugs and their chief constituents used in indigenous and allopathic system of medicine with special reference to *Azadirachta indica*, *Embllica officinalis*, *Aloe vera*, *Ocimum sanctum*, *Ravulfia serpentina*, *Linca. rosea*, *Datura stramonium*, *Withania somnifera*, *Curcuma longa*. Natural Rubber (*Hevea brasiliensis*), *Ficus elastica*. Essential oil, dyes - a concise account. Ornamental plants Familiarity with seasonals and perennials grown in your locality.

Suggested laboratory exercises:

Economic botany

- World Map of Vavilov's Centres of origin of cultivated plants and Zhukovskys concept of megacentre
- Study of starch grains in wheat and potato.
- Cereals: wheat, rice, maize, sorghum, bajra.
- Legumes (chickpea, bengal gram), red gram (arhar), black gram.
- Vegetable plant parts: tomato, round gourd, cluster bean.
- Sudan III test for groundnut and coconut oil Rajasthan.
- Economic Botany: Spices, Beverage (Tea & Coffee), Sugar, Oil Seeds (Mustard Groundnut)
- Medicinal plants- *Azadirachta indica*, *Embllica officinalis*, *Aloe vera*, *Ocimum sanctum*, *Ravulfia serpentina*, *Datura stramonium*, *Withania somnifera*.

Suggested Books:

XII - Paper - Embryology of Angiosperms and Seed science

UNIT-I

38

Dy. Registrar
(Academic)
University of Rajasthan
JAIPUR

Structure of anther Microsporogenesis: formation of pollen grains (male gametophyte) pollen germination, pollen tube growth.

Structure of pistil Ovary megasporogenesis, development of embryo sac (female gametophyte).

Mechanisms and agencies of pollination: Pollen-s—interaction: self-incompatibility double fertilization; apomixis.

Seed and fruit Development of endosperm and embryo in monocotyledons and dicotyledons: storage of reserve materials and desiccation in seeds; fruit maturation ripening and dispersal.

UNIT-II

Morphology and anatomy of seed: Development and structure in dicotyledons and monocotyledons (Fabaceae and Poaceae). exomorphic features, gross internal morphology and seed coat anatomy.

Physiology of seed Dormancy—significance, types and release of dormancy: Longevity—life span of seed and factors affecting longevity.

Seed testing procedures Introduction, History of Seed Technology, Aims and importance of seed testing, sampling- types of samples, sampling equipments, methods of testing physical purity and genetic purity (seedling and plant stages), moisture content (oven method, moisture meter): Germination-TTC test, embryo excise method blotter method, roll towel: sand or pot experiment; seeding evaluation.

UNIT-III

Seed storage: Principles and methods of safe seed storage, types of storage structures, detection of seed storage and its control.

Seed Health: Detection of seed-borne inoculum of pathogens; location of seed-borne inoculum. Methods of seed health testing (Dry seed examination, seed washing test, incubation method and partner's method).

Seed Certification: Concept, minimum certification standards, general and crop standards, Field inspection and ISTA certificates.

The seeds Act of India, National Seeds Corporation, State Seed Corporation, Central Seed Testing Laboratory.

Suggested laboratory exercises:

Embryology

- I.S. of microsporangia.
- Types of ovules and placentation.
- Pollen germination and viability.
- Seed germination and seed viability in monocot and dicot plants.
- Diversity in structure of stigma and style.
- Different stages of Embryo-*Raphanus sativus*.
- Monocot and dicot embryo dissection and study of its structure.

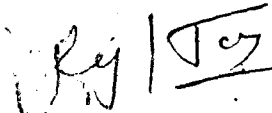

Seed science

- Biochemical test of Carbohydrates, Protein and Lipids.
- Study of seed surface microflora of different seeds (wheat, sorghum, bajra and mung).
- Seed viability test (FTC test).
- Calculate seed purity percentage.
- Study seed coat anatomy of different seeds (*Cicer*, pea and maize).
- ISTA certificates.
- Seed health testing by different methods.

Suggested Readings:

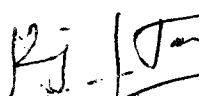

- Agarwal, N. and Sinclair, J.B. (1987). Principles of Seed-pathology, II edition. Publishers Boca Raton, New York, London.
- Agrawal, N. (1980). Seed Technology. Oxford and IBH Publishing Co. Pvt. Ltd. New Delhi.

MATHEMATICS (HONS.)**S. B.Sc. (Hons.) Part –III – 2020**

Teaching : 3 Hours per Week per Theory Paper.

Examination :

	Min.Pass Marks		Max. Marks
Scheme:	Science – 160		400
		Duration	Max.Marks
Paper – IX	Algebra	3 hrs.	85
Paper – X	Complex Analysis	3 hrs.	85
Paper – XI	Mechanics	3 hrs.	85
Paper – XII	Any one of the following		
1.	Statistics	3 hrs.	85
2.	Integral Equations and Calculus of Variations	3 hrs.	85
3.	Calculus of Several Variables	3 hrs.	85
Practical		2 hrs.	60

Note:

1. Common paper will be set for both the Faculties of Social Science and Science. However, the marks obtained by the candidate in the case of Faculty of Social Science will be converted according to the ratio of the maximum marks of the papers in the two Faculties.
2. Each candidate is required to appear in the Practical examination to be conducted by internal and external examiners. External examiner will be appointed by the University and internal examiner will be appointed by the Principal in consultation with Local Head/Head, Department of Mathematics in the college.
3. An Internal/external examiner can conduct Practical Examination not more than 100 (Hundred) candidates.
4. Each candidate has to pass in Theory and Practical examinations separately.

Paper -IX : Algebra

Teaching : 3 Hours per Week

Duration of Examination : 3 Hours

Max. Marks: 85

Note: This paper is divided into FIVE Units. TWO questions will be set from each Unit. Candidates are required to attempt FIVE questions in all taking ONE question from each Unit. All questions carry equal marks.

Unit 1: Definition and simple properties of Groups and Subgroups. Permutation group, Cyclic group. Cosets, Lagrange's theorem on the order of subgroups of a finite order group.

Unit 2: Morphism of groups, Cayley's theorem. Normal subgroups and Quotient groups. Fundamental theorems of Isomorphism.

Unit 3: Definition and simple properties of Rings and Subrings. Morphism of rings. Embedding of a ring, Integral domain and field. Characteristics of a Ring and Field.

Unit 4: Ideals and Quotient Ring. Maximal ideal and Prime ideal. Principal Ideal domain. Field of quotients of an integral domain. Prime fields. Definition, Examples and Simple properties of Vector spaces and Subspaces.

Unit 5: Linear combination, Linear dependence and Linear independence of vectors. Basis and Dimension. Generation of subspaces. Sum of subspaces. Direct sum and Complement of subspaces. Quotient space and its dimension.

Paper – X: Complex Analysis

Teaching : 3 Hours per Week

Duration of Examination : 3 Hours

Max. Marks: 85

Note: This paper is divided into FIVE Units. TWO questions will be set from each Unit. Candidates are required to attempt FIVE questions in all taking ONE question from each Unit. All questions carry equal marks.

Unit 1: Complex plane. Connected and Compact sets. Curves and Regions in complex plane. Jordan curve Theorem (statement only). Extended complex plane. Stereographic projection. Complex valued function – Limits, Continuity and Differentiability. Analytic functions, Cauchy-Riemann equations (Cartesian and polar form). Harmonic functions, Construction of an analytic function.

Unit 2: Complex integration, Complex line integrals, Cauchy integral theorem, Indefinite integral, Fundamental theorem of integral calculus for complex functions. Cauchy integral formula, Analyticity of the derivative of an analytic function, Morera's theorem, Poisson integral formula, Liouville' theorem.

Unit 3: Taylor's theorem. Laurent's theorem. Maximum modulus theorem.

Power series – Absolute convergence, Abel's theorem, Cauchy-Hadamard theorem, Circle and Radius of convergence, Analyticity of the sum function of a power series.

Unit 4: Singularities of an analytic function, Branch point, Meromorphic and Entire functions, Riemann's theorem, Casorati-Weierstrass theorem.

Residue at a singularity, Cauchy's residue theorem. Argument principle. Rouché's theorem. Fundamental theorem of Algebra.

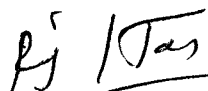

Unit 5: Conformal mapping. Bilinear transformation and its properties. Elementary mappings: $w(z) = \frac{1}{2} \left(z + \frac{1}{z} \right)$, z^2 , e^z , $\sin z$, $\cos z$, and $\log z$.

Evaluation of a real definite integral by contour integration. Analytic continuation. Power series method of analytic continuation.

Paper – XI: Mechanics

Teaching : 3 Hours per Week

Duration of Examination : 3 Hours

Max. Marks: 85

Note: This paper is divided into FIVE Units. TWO questions will be set from each Unit. Candidates are required to attempt FIVE questions in all taking ONE question from each Unit. All questions carry equal marks.

Unit 1: Velocity and acceleration – along radial and transverse directions, along tangential and normal directions. S.H.M., Hooke's law, motion along horizontal and vertical elastic strings.

Unit 2: Motion in resisting medium– Resistance varies as velocity and square of velocity. Work and Energy. Motion on a smooth curve in a vertical plane. Motion on the inside and outside of a smooth vertical circle. Projectile.

Unit 3: Central orbits – p-r equations, Apses, Time in an orbit, Kepler's law of planetary motion. Moment of inertia – M.I. of rods, Circular rings, Circular disks, Solid and Hollow spheres, Rectangular lamina, Ellipse and Triangle. Theorem of parallel axis. Product of inertia.

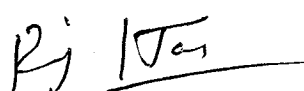

Unit 4: Equilibrium of coplanar force, moments and friction.

Unit-5: Virtual work and Catenary.

Paper – XII: Any One of the Following:

Paper – XII(I): Statistics

Teaching : 3 Hours per Week

Duration of Examination : 3 Hours

Max. Marks: 85

Note: This paper is divided into FIVE Units. TWO questions will be set from each Unit. The candidates are required to attempt FIVE questions in all taking ONE question from each Unit. All questions carry equal marks.

Unit 1: Frequency distributions and measures of location, Measures of dispersion, Skewness and Kurtosis, Moments of frequency distributions.

Unit 2: Mathematical expectation, Moment generating and Cumulative functions. Discrete probability distributions (Binomial, Poisson, Geometric and Hypergeometric).

Unit 3: Continuous probability distributions (Rectangular and Normal distributions).

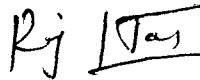

Unit 4: Methods of least squares and curve fitting. Correlation and Regression, Multiple and partial correlation.

Unit 5: Theory of probability.

Paper- XII(II): Integral Equations and Calculus of Variations

Teaching : 3 Hours per Week

Duration of Examination : 3 Hours

Max. Marks: 85

Note: This paper is divided into FIVE Units. TWO questions will be set from each Unit. The candidates are required to attempt FIVE questions in all taking ONE question from each Unit. All questions carry equal marks.

Unit 1: Linear Integral Equations- Definition and classification, Conversion of initial and boundary value problems to an integral equation, Eigen values and Eigen functions and their properties for symmetric kernels. Solution of homogeneous and general Fredholm integral equations of second kind with degenerate kernels.

Unit 2: Iterated kernels and their properties. Construction of resolvent kernel with the aid of iterated kernels. Solution of Fredholm and Volterra integral equations of second kind by using resolvent kernel method. Fredholm determinants. Solution of Fredholm integral equation of second kind by using Fredholm determinants.

Unit 3: Laplace transform- Definition and its properties. Rules of manipulation. Laplace transform of derivatives and integrals. Properties of inverse Laplace transform. Convolution theorem.

Unit 4: Abel's integral equation and its generalizations. Application of Laplace transform to solve the Volterra integral equations with convolution type kernels.

Calculus of Variations- Variation and its properties. Euler's equation. Functionals. Functionals dependent on Higher order derivatives and functions of several independent variables.

Unit 5: Variational problems in parametric form. The moving boundary value problem for a function of the form $\int_{x_1}^{x_2} f(x,y,z) dx$. Euler's finite difference method. Ritz method for variational problem.

Reference Books :

Paper – XII(III): Calculus of Several Variables

Teaching : 3 Hours per Week

Duration of Examination : 3 Hours

Max. Marks: 85

Note: This paper is divided into FIVE Units. TWO questions will be set from each Unit. The candidates are required to attempt FIVE questions in all taking ONE question from each Unit. All questions carry equal marks.

Unit 1: Normed vector space, Distance, Inner product. Open and Closed sets. Compactness, Connectedness. Sequence and series. Continuous functions.

Unit 2: Calculus in vector space- Functions on n -space, Space of continuous functions, Differentiability and the chain rule, Properties of derivative. Partial derivatives, Jacobian, Differentiation under integral sign.

Unit 3: Mean value theorem and its applications. Higher derivatives and Taylor's formula. Invertible and implicit functions. Continuously differentiable functions. Maxima and minima.

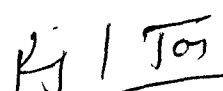

Unit 4: Multiple integral on \mathbb{R}^n . Closed n -rectangle. Lower and upper Riemann sums. Lower and upper Riemann integrals. Riemann integral. Characteristic function. Admissible function. Admissible set. Criteria for admissibility. Repeated integral. Change of variables.

Unit 5: Ordinary Differential Equations- Integral and Approximate solutions. Lipschitz's property. Comparison of two approximate solutions. Existence and Uniqueness theorem (statement only). Linear differential equation.

Practical

Teaching: 2 hours per week per batch not more than 20 students.

Examination:

Duration: 2 Hours

Scheme

Max.Marks 60

Min.Pass Marks 22

Distribution of Marks :

Two Practicals one from each group

20 Marks each = 40 Marks

Practical Record = 10 Marks

Viva-voce = 10 Marks

Total Marks = 60 Marks

The paper will contain TWO practicals. The candidates are required to attempt both practicals.

Practicals with Computer Programming in C Language.

Group A:

1. Solution of algebraic and transcendental equations by Bisection method, Regula-falsi method and Newton-Raphson method.
2. Solution of Initial value problems by Euler's method and Runge-Kutta(third and fourth order) method.

Group B:

1. Matrix operations: addition, subtraction, multiplication, Rank of a matrix, inverse of a matrix.
2. Solution of linear algebraic equations by Gauss elimination method, Matrix method, Gauss Jordan method.

Note:

1. Each Candidate (Regular/non-Collegiate) has to prepare his/her practical record.
2. Each Candidate has to pass in Practical and Theory examinations separately.

6. PSYCHOLOGY (HONS.)

B.Sc. (Hons.) Part -III – 2020

SCHEME OF EXAMINATION :

Papers	Nomenclature	Duration	Max. Marks	Min. Pass Marks
Paper-IX	Applied Psychology	3 Hrs.	75	120
Paper-X	Positive Psychology	3 Hrs.	75	
Paper-XI	Theories of Personality	3 Hrs.	75	
Paper-XII	Psychological Testing	3 Hrs.	75	
	Practical	3 Hrs.	100	40

NOTE:-

1. There will be 4 Theory Papers in Psychology in B.A. Honours Part-III. Each paper will be of 3 hours. There will be a common paper for Arts and Science. There will be 3 Sections A, B and C in all the papers and will cover the entire course content of the paper.

Section-A will contain 10 questions of 20 words consisting of 1.5 marks each. Thus, Part-A will be of 15 marks.

Section-B will contain 7 questions of 50 words each, out of which students are required to attempt 5 questions. Each question will be of 3 marks. Thus, Part-B will be of 15 marks.

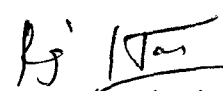

Section-C will contain 3 long questions each with internal choice. Each question will be of 15 marks.

Thus, Part-C will be of 45 marks.

For clarification the distribution of marks is tabulated as below:-

B.A. Honours(Psychology)Part-III			
Section	No. of Questions	Marks	Total
A	10	1.5	15
B	5 (Out of 7)	03	15
C	3 (with internal choice)	15	45
		Total Marks	75

Jaipur

Paper IX - Applied Psychology

Section-A

1. Psychology in Industry: Personnel selection and classification.
2. Personal Assessment Techniques: Development and Training; Attitude and Motivation.
3. Organization Psychology: Leadership and Supervision, Participated Management, Job Design, Organizational Structure and Climate, Communication.

Section-B

4. Engineering Psychology: Human performance; Human factors in Equipment Design.
5. Stress Management: Psychological Determinants and Stress Management.
6. Information Technology and Mass Media: Understanding Wellbeing and Human Rights through Information Technology; Media and Communication, Media Violence and Cyber Crime.

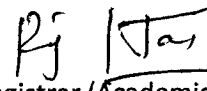

Section-C

7. Psychology in Education: School System, Measurement and Evaluation, Instructional Psychology, Behaviour Modification in School Setups.
8. Community Psychology: Concept and Goals; Social Change and Social Action, Arousing Community Consciousness.
9. Sports Psychology: Meaning, Nature and Scope; Psychological Skills in Sports.

Books Recommended :

- Anastasi, A. (1979). *Fields of Applied Psychology*. New York: McGraw Hill.
- Schien. (1967). *Organizational Psychology*. New Delhi: Prentice-Hall.
- Korchin, S. (1976). *Modern clinical Psychology*. New York: Basic Books.
- Mohan, J. Chaddha, N.K. & Akhtar, S.S. (1992). *Psychology of Sports*. New Delhi: Fiends Publications.

51

 Dy. Registrar (Academic-I)
 University of Rajasthan
 Jaipur

Paper X - Positive Psychology

Section A

1. Introduction: Definition, Goals, Assumptions and Historical Perspective; Relationships with other Branches of Psychology.
2. Eastern and Western Perspectives on Positive Psychology.
3. Virtues and Strengths of Characters: Classification and Measures of Human Strength- Gallup's Clifton Strength Finder. The VIA Classification. Identifying Personal Strengths.

Section B

4. Happiness and Wellbeing: Definition; Hedonic and Eudaimonic basis of Happiness; Subjective Wellbeing, Psychological Wellbeing and Social Wellbeing.
5. Resilience: Meaning, Developmental and Clinical Perspective, Sources of Resilience, Successful Aging and Growth through Trauma.
6. Pro-Social Behavior: Empathy, Altruism, Gratitude and Forgiveness

Section C

7. Self-Regulation and Self Control : Theories and Planning for Self-Regulation Success, Self-Regulations Problems – Goal Conflict, Goal Difficulty and Goal Disengagement
8. Positive Cognitive States and Processes: Self Efficacy, Optimism, Hope, Mindfulness, Flow and Spirituality.
9. Positive Emotional States and Processes: Meaning, Theories and Resources of Positive Emotions; Emotional Intelligence; Emotional Focused Coping.

Books Recommended :

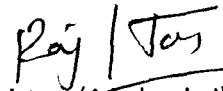

- Snyder, C.R. & Lopez, S.J.(2007). *Positive psychology*. New Delhi: Sage.
- Snyder, C.R. and Lopez. J.(2005). *Handbook of positive psychology*. New York: Oxford Press.
- Baumgardner, S. & Crothers, M. (2009). *Positive psychology*. New Delhi: Pearson education.

Paper XI - Theories of Personality

Section-A

1. Introduction: Definition, History and Basic Issues. Biological and Cultural Determinants of Personality.
2. Psychoanalytic Theories: Freud and Modern Developments.
3. Neo-Analytic and Ego Theories: Jung, Adler, Horney and Erikson.

52

Dy. Registrar (Academic-I)
University of Rajasthan
Jaipur

Section-B

4. Biological Theories: Genetic Effects and Temperament; Sociobiological and Evolutionary Factors.
5. Behaviourist and Learning Theories: Watson, Skinner, Dollard and Miller.
6. Cognitive and Social Cognitive Theories: Kelly, Seligman, Rotter and Bandura.

Section-C

7. Trait Theories: Cattell, Allport and Big Five Model.
8. Humanistic and Existential Theories: Fromm, Rogers and Maslow.
9. Person-Situation Interactionist Theories: Sullivan, Murray and Mischel.

Books Recommended :

- Hall, J. & Lindzey, G. (1978). *Theories of Personality*. New York: Wiley.
- Friedman, H.S. & Schustack, M.W. (2003). *Personality : Classical Theories and Modern Research*. New Delhi: Pearson Education.

Paper XII -Psychological Testing

Section-A

1. Psychological Testing and Assessment:- Definition, Difference between Testing and Assessment , Tools of Psychological Assessment Interview, Case History Data, behavioral Observation, Computers as tools.
2. Psychological Scaling: Kinds, Characteristics and Uses of Scaling.
3. Psychological Tests: Nature, Functions and Current Uses; Kinds of Tests: Individual and Group Test. Characteristics of a Good Test.

Section-B

4. Problems in the Test Administration: Testing Programme, Professional Ethics, Controlling the Use of Psychological Tests, Problems of Report and Administration; Guidelines for Testing Programmes.
5. Problems of Test Construction: Drafting and Compilation of Test Items. Item Analysis; Issues of Reliability, Validity and Need for Cross Validation.
6. Test Standardization: Procedure, Establishment of Norms, Interpretation and Application of Test Scores, Prediction Value of Test.

53 .

Dy. Registrar (Academic-I)
University of Rajasthan
Jaipur

Section-C

7. Tests of Intelligence: Nature and Types- Verbal Tests, Non-language Tests, Performance Test, Test for Measuring Adult Intelligence, Special Tests; Culture Fair Tests.
8. Tests of Interest and Aptitude: Interest Tests- Educational and Vocational; Attitude Tests; Aptitude Tests; Academic Tests - Achievement Tests.
9. Tests of Personality: Self-Report Test, Inventories, Projective Techniques - Verbal, Non-verbal, T.A.T. and Rorschach, Situational Tests and Expressive Techniques.

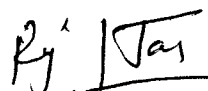

Books Recommended:

- Anastasi, A. & Urbina, S. (2017) . *Psychological Testing* . Noida: Pearson India Education.
- Gregory, R. J. (2017) . *Psychological Testing*. Noida: Pearson India Education.
- Cohen, R. J., Swerdlik, M. E. & Struman, E. D. (2017) . *Psychological testing and Assessment*. Chennai: McGraw Hill.

Practical

1. Reaction Time
2. Saving Method
3. Two Point Threshold
4. Work and Fatigue
5. Picture Frustration Study
6. Career Interest Checklist by Holland
7. NEOPI - R
8. Differential Aptitude Test
9. Rorschach Test
10. Assessment of Altruism
11. Assessment of Emotional Intelligence
12. Assessment of Need Achievement (Projective Method)

54

 Dy. Registrar (Academic-I)

 Jaipur

7. Geography

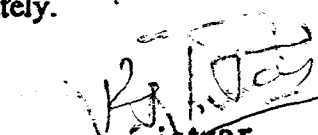

B.A./B.Sc. (Hons.) Geography Part-III Examination

Scheme of Examination

Min. Pass Marks 160 (40%)		Max. Marks 400
Paper -IX 3 hour duration	Geography of India	Max. Marks 80
Paper -X 3 hour duration	Evolution of Geographical Thoughts	Max. Marks 80
Paper -XI 3 hour duration	Fundamentals of Agricultural Geography	Max. Marks 80
Paper -XII 3 hour duration	Applied Geography	Max. Marks 80
Practical		Max. Marks 80

Notes

1. Students are permitted to use the stencils, simple calculator and log tables wherever needed in both theory and practical examinations.
2. There will be a common paper for Arts and Science.
3. Q.1 will be compulsory and will cover the entire course of the paper. Q.No. 1 of 20% marks of the total marks be set in two parts.
 - (a) Part (a) will have ten items for locating on a map (to be supplied by examination centre) carrying 10% marks of the maximum marks and candidates shall attempt any five items.
 - (b) Part (b) will have 10 short answer questions carrying 10% marks of the maximum marks and candidates shall attempt any five items.
4. Remaining 9 questions will be set with three questions from each section of the syllabus carrying equal marks.
5. Candidate will attempt 5 questions in all including question No. 1 selecting at least one question from each section.
6. Practical examination will be conducted by the board of examiners.
7. The candidate will have to pass in theory and practical separately.
